COLOUR THE PICTURE BELOW

Sightings

The Loch Ness Monster is one of the world's most famous mysteries. The monster is often called Nessie and is believed to live in the dark waters of the loch. The dark waters of Loch Ness are caused by peat being washed into the loch from nearby rivers. Because the waters of Loch Ness are so dark, Nessie is hard to spot. Some people think Nessie is a prehistoric seagoing dinosaur, a giant creature with a large rounded body and a long neck.

Over the years there have been numerous recorded sightings of the celebrity monster. These sightings are all very different.

Draw a picture of how you think Nessie would look...
